Billing Units

At the end of each billing period, the total data usage for a device in a particular country will be rounded up to that country's nearest billing unit.

For example, in the United States, the billing unit is 100 KB. If a device located in United States consumes a total of 4,139.52 KB in a particular month, the data usage will be rounded up to 4,200 KB when calculating total data charges.

Similarly, for a device consuming a total of 4,139.52 KB in the United Kingdom (where the billing unit is 1 KB), the data usage will be rounded up to 4,140 KB when calculating total data charges.

If a device consumes data in more than one country within a given month, data usage will be calculated separately for each country.

When converting between bytes, kilobytes, megabytes, and so on, Soracom uses the following conversion:

- 1,024 bytes (B) = 1 kilobyte (KB)
- 1,024 kilobytes (KB) = 1 megabyte (MB)
- (etc)

The total rounded charges for all devices will be combined, one corresponding for each country, and will appear on your invoice as a separate "Rounded Up" charge.
